

LCM for transport and mobility

Chair: Dr. Stephan Krinke, Head Environmental Affairs, Volkswagen AG, Germany

Co-Chair: Prof. Dr. Christoph Herrmann, Head of Sustainable Manufacturing & Life Cycle Engineering, Technical University of Braunschweig, Germany

This session covers life cycle management in the field of transport and mobility for persons and goods. Life cycle management encompasses strategies and measures to improve the environmental and sustainability performance of transport and mobility products and services over the entire life cycle ("from cradle to cradle"). This session aims to bring together different actors along the mobility value chain: Raw material suppliers, part suppliers, OEM's, the dealer network as well as representatives of the recycling sector for mobility products. The focus of the session will be on best practices and lighthouse projects of LCM to foster sustainable mobility.
